SYED FAIZAN ALI

AI/ML Engineer | MLOps | GenAI & LLM Applications

Hyderabad, India | alisyedfaizan390@gmail.com | +91 9853388611 | LinkedIn | Portfolio

PROFESSIONAL SUMMARY

AI/ML engineer with 2.5+ years of Python and AI/ML experience, shipping production ML and LLM systems end to end data preparation, PyTorch model training, deployment, versioning, and monitoring on hybrid cloud and on-prem NVIDIA GPUs. Built LLM-powered chatbot and recommendation APIs, and used FAISS vector search for fast embedding matching in production. Hands-on with MLflow model registry, Docker, Kubernetes, CI/CD (Jenkins, Azure DevOps), AWS and Azure, and OpenVINO/TensorRT optimization running 12–15 live camera streams on a single RTX 5060 Ti GPU at 95%+ accuracy. Led production go-lives in India and Dubai as technical lead of a 4-person team.

TECHNICAL SKILLS

- **Generative AI & LLMs:** LLM API Integration (Grok), LLM-Powered Chatbots, LLM Recommendation APIs, Prompt Engineering, Embeddings, Vector Search & Similarity Matching (FAISS), RAG Pipeline Design
- **Machine Learning & Computer Vision:** PyTorch, YOLO, ResNet, CNN, MLP, Object Detection & Tracking, Face Detection & Re-Identification, Multi-Camera RTSP Video Analytics, LiDAR Point Cloud Processing
- **MLOps & Model Lifecycle:** MLflow (Tracking & Model Registry), Model Versioning & Deployment, Training Data Prep & Annotation QA, Docker, Kubernetes, MicroK8s, CronJobs, YAML Workflows
- **Model Optimization & Inference:** OpenVINO, TensorRT, ONNX, Model Quantization, NVIDIA GPU Inference, REST Inference APIs (FastAPI), Cost & Performance Optimization
- **Cloud & DevOps:** AWS (EC2, S3, VPC, IAM), Azure (Deployment Automation), Azure DevOps, Jenkins, Git, GitHub, CI/CD Pipelines, Terraform, Ansible, Infrastructure as Code, Hybrid Cloud & On-Prem Architecture, Microservices
- **Monitoring & Observability:** Prometheus, Grafana, Model & Infrastructure Health Monitoring, Drift & Anomaly Alerting, Live Log Streaming
- **Backend, Data & Systems:** Python, FastAPI, Node.js, .NET, PostgreSQL, TimescaleDB, REST APIs, Linux (Production Servers)
- **Currently Upskilling:** SAP BTP — SAP AI Core, AI Launchpad, Generative AI Hub, SAP HANA Cloud Vector Engine

PROFESSIONAL EXPERIENCE

Navajna Technologies Private Limited — AI Engineer (Computer Vision & MLOps) *Feb 2025 – Present*

Retail AI Video Analytics Platform

- Built a real-time video analytics platform that pulls in multi-camera RTSP feeds and runs custom tensorrt YOLO, ResNet, and MLP models for person detection, tracking, re-identification, and entry-exit analytics, delivering 95%+ accuracy to clients.
- Built LLM-powered features for the retail analytics dashboard using the Grok API — an analytics chatbot and a recommendation API, served as FastAPI endpoints integrated into the dashboard.
- Used FAISS vector search to match person/face embeddings in production, speeding up cross-camera re-identification.
- Optimized inference with OpenVINO, TensorRT, and quantization to run 12–15 concurrent camera streams on a single NVIDIA RTX 5060 Ti GPU, keeping per-site hardware cost low.
- Tracked experiments and versioned models with MLflow and its Model Registry, and automated deployments to Azure through Jenkins and Azure DevOps CI/CD pipelines.
- Designed the hybrid architecture end to end — cloud APIs/UI, PostgreSQL/TimescaleDB, on-prem GPU inference, and Docker/MicroK8s microservices via Kubernetes YAML, with CronJobs auto-scaling GPU workloads.
- Set up Prometheus and Grafana for monitoring, added custom alerts and live log streaming through kubectl and FastAPI, and exposed everything securely via Cloudflare Tunnel instead of opening ports directly.
- Delivered production go-lives across 2+ client sites — including an on-site rollout in Dubai — without a failed launch, while leading a 4-person engineering team as the main technical point of contact under tight deadlines.

Axira – NHAI Road Defect Detection Platform

- Trained YOLO-based object detection models to spot road defects from a vehicle-mounted rig — two high-resolution cameras, two LiDAR sensors, IMU, and GPS all feeding into the same pipeline.
- Prepared and quality-checked annotated training datasets, tuned models through hyperparameter sweeps, and processed LiDAR point clouds to measure defect depth/width/length and classify road terrain as flat, rolling, or hilly.
- Geo-tagged results with IMU/GPS and stored outputs and geometry metadata in PostgreSQL for reporting.
- Also delivered the Mercedes track-history platform (Node.js/.NET monolith), containerized with Docker.

Rechifyme, Bangalore — Python Developer *Apr 2024 – Feb 2025*

- Built a modular Python data-collection pipeline with automated error handling and retries, and cleaned, preprocessed, and loaded the data into PostgreSQL for downstream analytics.

EDUCATION

B.Tech in Computer Science and Engineering — C.V. Raman Global University | CGPA: 8.46

CERTIFICATIONS & LANGUAGES

Certifications: DevOps Fundamentals (IBM) · Docker Essentials: A Developer Introduction (IBM) · Scalable Web Applications on Kubernetes (IBM)

Languages: English, Hindi, Odia, Arabic
